

Case Study

LEADING MULTINATIONAL IT HARDWARE MANUFACTURER

THE CHALLENGE

This client is one of most technologically advanced and trusted manufacturing solutions provider to the electronics and IT sectors.

In Ireland they have a large manufacturing facility developing servers for some of the world's leading companies.

They engaged with GemPool for a concern they had with regards a growing default of products.

They had a lot of inventory sitting around the facility that needed to be de-bugged and rebuilt as fast as possible in order to meet targets. Their challenge was finding a skilled team on a temporary basis to solve this growing concern.

SOLUTION

GemPool's experience in the Data Center and IT Hardware space allowed us to identify specific skilled individuals who have worked on similar products and deployed them onsite in a matter of days.

Thanks to our extensive network we were able to deploy 8 skilled people to site within a week.

We were able to scale these skillsets up and down based on demand, as it grew at its peak we managed 16 people over 2 shifts to keep the companies targets on course.

RESULT

The result was that GemPool successfully filled the growing demand in record time, with a turnaround times of less than one week from job requested to people onsite. We assisted the company in improving their output.
